

## **Maintenance and Faculties**

From 2023 the DAC will require evidence of regular maintenance being carried out on your church as part of your Faculty application. This is due to the importance of maintenance moving forward, we need regular maintenance in all our churches moving towards a net zero future. Faculties are often for expensive and intrusive repairs that can be mitigated through regular maintenance.

Providing evidence of a maintenance plan shows us that you are actively maintaining your church and mitigating the need for these expensive repairs in the future. It also shows us that you are moving in the right direction towards net zero carbon. If you know you are actively caring for your church and keep it in a good condition, then we know you are ready for the next steps for net zero.
